IDpack
IN THE CLOUD

Take control of your security with **IDpack in the Cloud**

IDpack in the Cloud ("IDC") is the best cloud-based solution for designing, managing, and printing ID cards online. Access your ID cards anywhere in the world at any time and every day from any modern web browser.

IDC helps organizations enhance their security requirements with access control cards, membership cards, convention badges, price tags, student ID cards, business cards, event passes, and other ID cards. **IDpack in the Cloud** supports all card printers including Evolis, HID Fargo, Zebra, Entrust and Magicard.

Choose from four editions to suit your needs and budget. From the *IDC Element* plan with up to 600 records, single-side printing and one user, to the *IDC Enterprise* plan with up to 6,000 records, double-side printing and unlimited users. Each organization gets a unique encryption key and all sensitive data is encrypted in our database using that key for maximum security.

IDC Enterprise is specially designed for organizations that print badges for others. It has an additional role called Customer, and they can add badges to a Print Queue and be printed from a centralized place.

Unlock the power of your ID card printer with **IDpack in the Cloud**. IDpack has been the number one choice of event organizers, trade associations and corporations of all types since 1999. IDC is the result of 24 years of passionate dedication and experience.

Print Queue (Customers can add prints to Queue)				●
Customer Roles and Notification System				●
Features	Element	Business	Professional	Enterprise

Additional Records and API Query can be purchased separatly.

IDpack in the Cloud (" IDC") is a S*oftware as a Service application* (" SaaS"), also known as a Web-based solution with an annual subscription fee. No wasting time downloading or installing software on your workstation, no more compatibility issues, no more database set-up or synchronization process with your different users. All your data is now centralized and well-protected in our database in the cloud. Your data is now accessible anytime from any modern Web browser used on your desktop, laptop, or tablet of any brand: Windows, Macintosh, and Android. Once you've tried it, you'll never look back!

IDC includes two main sections: **Project Designer**, where you choose and customize a badge template, and **Badge Producer**, where you open your Project, create records, capture your Photo ID, and print your badges.

Project Designer

In this section, you create your design as a project. To create a new badge, price tag or ID card, first go to **Designer** and click *Add New*. A project includes all the configuration needed to print your cards: you choose your template and the fields you need, enter the printer model, choose color-coding if needed, what barcode you want to use, what field it will be encoded in and much more.

Badge Producer
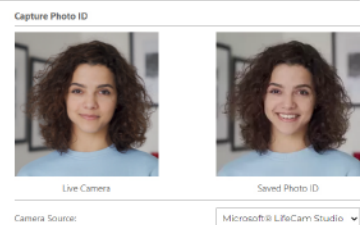

In this section, you select a project (previously created in **Designer**) to access the list of cards you want to manage. Click on a record or create a new one and enter the information in the fields, choose the color code, capture the picture and save the card in the cloud. When you are ready, click *Print Preview* to see the card and if you are satisfied, you can print it directly to your card printer.

When you have access to **Designer** and need to print hundreds or thousands of cards at a large-scale event, you do not want your **Producer** users to be able to interfere with the design of your cards in any way. This provides a major security advantage and includes user-access management tools, clearly differentiating IDC from its competitors.
